SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	03/21/2007	PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

Office Action Summary

Application No.

10/807,900

Applicant(s)

RYAL, KIM ANNON

Examiner

Paulos M. Natnael

Art Unit

2622

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on RCE filed 2/27/07.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/27/07 has been entered.

Response to Arguments

2. Applicant's arguments filed 2/27/07 have been fully considered but they are not persuasive.

3. Applicant argues that Arora may drive additional video streams, but only one output video stream at a time is displayed, and that would necessarily contain the same information as the output video stream since Arora [allegedly] does not disclose displaying the video stream in windows "simultaneously". (see remark, page 10)

4. The examiner disagrees. (1) Arora discloses, "the multimedia device 140 can generate video windows of arbitrary sizes for displaying output video stream 145 based on a selected aspect ratio." (Paragraph [0013]) Since Arora discloses generating a second video stream based on a first video stream (see claim 1, page 6), and the device 140 can generated video windows of arbitrary sizes, the different size video

Art Unit: 2622

windows displaying the video stream constitute modified versions of the video stream.

In other words, Arora does not preclude displaying multiple versions of the video stream

145 (windows of arbitrary sizes), because, contrary to applicant's argument, the skilled

in the art would readily recognize displaying the same video stream (145) on multiple

windows of different sizes (or the same sizes) makes no sense. It is clear from the

teaching of Arora a second video stream, for example, is generated from the first video

stream and the video streams would be displayed in multiple windows in different sizes

as desired.

(2) As was shown in the previous office action, the application discloses that modifying comprises duplicating and removing or adding at least one video element from or to the video stream to produce a modified duplicated video stream (see page 3).

Likewise, Arora discloses providing modified video stream by eliminating the extraneous video used to convert video having second aspect ratio [paragraph 0010]. The

multimedia device 140 can generate video windows of arbitrary sizes for displaying

output video stream 145 based on a selected aspect ratio [0013]. (Note the plural:

windows; also, as the skilled in the art would realize, if a display has "windows" the

images must be displayed in picture-in-picture (PIP) or picture within a picture, or

picture-out-picture. Thus, Arora inherently discloses the notoriously well- known PIP).

The multimedia device can then present a second video stream to the user. The

second video stream is presented at the detected aspect ratio. In one embodiment, the

second video stream represents the video content in the first video stream with a

significant amount of extraneous video, such as the black bars, removed. [See 0023]. Thus, the examiner submits, Arora clearly states not only an output video stream, as applicant asserts, but that the system can present a second video stream as well. To emphasize this, Arora discloses, "receiving a first video stream, wherein the first video stream is provided at a first aspect ratio, providing a second video stream, based on the first video stream, wherein the second video stream is provided at the second aspect ratio." (see claim 1, page 6) The key here is the phrase "based on the first video stream." If it is based on the first video stream, it must have been duplicated, or is a duplicate, a copy, of the video stream, except it is modified by removing some elements of the video such as the black bars! Therefore, the argument that Arora does not use the same words such as duplicate, copy simultaneous, picture, PIP as that of the instant application and, thus, does not disclose or suggest the claimed subject matter, is unpersuasive because one does have to use the same words and terms the applicant is using. It is important that the applied reference (Arora) aims to solve similar problem that of the instant application but does not have to use the same terms to describe the problem or the solution.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

6. Claims **1,2,4, 8-33** are rejected under 35 U.S.C. 102(e) as being anticipated by Arora, U.S. Patent Application Publication No. 2004/0114049.

Considering claims 1, 14-17,25, 30, (as amended) Arora discloses a system for detecting aspect ratio. The method includes receiving an input video stream. The input video stream is provided at a first aspect ratio. In one embodiment, the input video stream is provided as part of an analog video stream and the first aspect ratio is a standard or full screen, television aspect ratio, such as a 4:3 aspect ratio. The method also includes determining a second aspect ratio, different from the first aspect ratio. In one embodiment, the input video stream is analyzed to identify portions of the input video stream that are moving. The portions of the input video stream that are moving are used to identify a video content aspect ratio which may be present in the first input video stream, wherein video outside of the video content aspect ratio is related to extraneous video, such as black bars, used to make up the rest of the video frame to attain the first aspect ratio. The video content aspect ratio can then be used to identify the second aspect ratio. The method further includes providing a modified video stream, based on the input video stream. The modified video stream is provided at the second aspect ratio. The present disclosure has the advantage of eliminating the extraneous video used to convert video having the second aspect ratio to video having

Art Unit: 2622

the first aspect ratio. Another advantage of at least one embodiment of the present disclosure is that users can reduce an amount of desktop space used to provide video playback by eliminating black bars provided with the video. (Paragraph [0011]) The method comprises receiving a first video stream, providing a second video stream, based on the first video stream. (page 6) FIG. 1 illustrates a system for generating a modified video stream from a received video stream is shown and referenced generally as system 100, according to one embodiment of the present disclosure. (See paragraph [0011])

Arora further discloses, "...A portion of multimedia data 125 can be identified for storage or display. Furthermore, multimedia device 140 can generate video windows of arbitrary sizes for displaying output video stream 145 based on a selected aspect ratio...Aspect ratio detector 130 identifies the portion of multimedia data 125 to process, store, or display. The full-screen aspect ratio allows the first video stream to be displayed on a standard television screen...the system includes an information handling system capable of presenting a representation of the first video stream in a window having an arbitrary size. The system is capable of displaying video using a variety of aspect ratios. (See paragraph [0021]). The multimedia device can then present a second video stream to the user. The second video stream is presented at the detected aspect ratio. In one embodiment, the second video stream represents the video content in the first video stream with a significant amount of extraneous video, (i.e. modified) such as the black bars, removed. See [0023]. If the video stream to be displayed is to be displayed full-screen and the detected aspect ratio is not the same as the aspect

ratio of the display device, the aspect ratio used to display the video stream may need to be modified. Accordingly, the aspect ratio of the display device may be applied to the detected aspect ratio for full-screen display, while still reducing extraneous video present in the first video stream. Once step 240 is completed, step 210 can be performed again. While the received video stream is still provided at the first, or standard, aspect ratio, the video content aspect ratio can change, such as due to a commercial or change in programming. Accordingly, the received video stream can be re-analyzed to detect new aspect ratios. [0025] [all emphasis added] Thus, Arora discloses all claimed subject matter.

Considering claim 2, Arora discloses that determining a second aspect ratio includes identifying program content associated with the first video stream; identifying a video content aspect ratio based on the program content, and applying the video content aspect ratio to the second aspect ratio. (See page 6, claims 1 and 8)

Considering claim 4, see rejection of claim 1;

As to claims 8 and 9, see discussion for Fig.4 and elsewhere throughout the disclosure.

Considering claims 10-13, 18-19 Arora modifies the input video stream by eliminating black bars, for example, (see page 1, paragraph 0010 and 0011) and extraneous video content can be added. See paragraph [0014].

Regarding claim 20, Arora discloses the multimedia device includes an MPEG device. MPEG is well known in the art and that a transport stream (TS) or MPEG-TS is a format specified in MPEG. Thus, Aurora inherently discloses TS.

As to claims 21-22, see rejection of claim 20.

Regarding claims 23-24, Arora discloses the multimedia device 140 comprises an MPEG device. A parser is a program for viewing the internal structure of **MPEG**-files in MPEG. Therefore, the device 140 would inherently include such a program to detect the video stream.

Regarding claim 26-28, see rejection of claim 21-22.

Considering claim 29, see rejection of claim 25.

Considering claim 31, see rejection of claim 30.

Considering claim 32, the Internet as a source of data such as text, graphics, video and audio is notoriously well known in the art. In that regard, Arora teaches the following:
[0002] Consumer interest in multimedia entertainment has expanded. Computer systems can be used to enhance a multimedia experience to a consumer. Computer

Art Unit: 2622

systems can include communications interfaces to receive and process multimedia data from a network, such as the Internet, or compact disk (CD) or digital video disk (DVD) drives to playback video to the consumer. Computer systems can include television tuner cards to receive analog multimedia data. By playing back video within a computer system, windows used to present video within an operating system can be resized to match different aspect ratios associated with the video data. Similarly, multimedia data can be stored in the computer system for future playback in the aspect ratio the video is to be displayed. See paragraph [0002].

As to claim 33, see rejection of claim 32.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims **3, 5-7, and 34-36**, are rejected under 35 U.S.C. 103(a) as being unpatentable over Arora, US Pub. No. 2004/0114049.

Considering claim 3, Arora discloses display device 455 and video system 400 as illustrated in Fig.4, as well as methods of modifying the received video stream and

Art Unit: 2622

displaying it on the display 455. Arora does not specifically disclose designating a location for the window. However, the examiner takes Official Notice here in that designating a location to display a PIP or a window is notoriously well known in the art of computers or television broadcast reception and, therefore, it would have been obvious to those with ordinary skill in the art because, otherwise, the image would not be displayed properly as the user intended.

Considering claim 5, see rejection of claim 3.

Regarding claims 6 and 7, Arora does not specifically disclose synchronizing the two video streams. However, the examiner takes official notice in that it would have been obvious to those with ordinary skill in the art that the two video signals would be synchronized to each other if they are to simultaneously be displayed as seamlessly as possible as claimed.

Considering claim 34-35, see rejection of claims 10 and 11 above.

Considering claim 36, Arora discloses receiving video stream. Such video data/stream is well known to originate from a studio, a head-end, a broadcasting station, or a transmitting tower. Therefore, the examiner takes Official Notice here in that the studio, the head-end, etc. as a source or originator of programs for broadcast such as audio/voice, video or television signals is notoriously well known in the art of broadcast

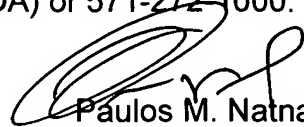

and it would have been obvious to those with ordinary skill in the art that Arora would be receiving the video stream 105 from such sources.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paulos M. Natnael whose telephone number is (571) 272-7354. The examiner can normally be reached on 8AM-4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Ometz can be reached on (571)272-7593. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
